The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/553,212	Applicant(s) VAN HATTEM ET AL.	
	Examiner Reginald L. Alexander	Art Unit 3742	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1, 2, 4, 5 and 7-10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, at line 5 it is recited that compressed air is being admitted "thereinto". It is unclear from the claim into what the air is being admitted. Both the "brewing chamber" and "mixing chamber" are mentioned before the phrase. It recited in the claim that the substances need to prepare the infusion are mixed by compressed air and that the compressed air closes the automatic valve. While a conduit is disclosed for delivering compressed air to close the valve, there is no recited means for supplying the air to mix the substances in the brewing chamber.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4, 5 and 7-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Burney.

Claims 1, 2, 4, 5 and 7-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burney.

There is disclosed in Burney a brewing device, comprising: a brewing chamber 10; a supply (mixing) hopper located above the brewing chamber for providing to the brewing chamber a brewing substance (coffee, tea), the hopper formed as a truncated member attached to an upper side of the brewing chamber; an opening formed between the hopper and brewing chamber interior chamber; a removable filter 12 that closes a lower side of the brewing chamber; an automatic valve 14 designed to seal the opening, the valve having an umbrella shape; an air compression means 20 for actuating the valve and providing air to the brewing chamber interior for mixing the ingredients; and an air venting conduit 40 provided in the valve leading to the mixing hopper.

In regards to the delivery of air below the automatic valve, in Burney once the valve is in its extended position within the brewing chamber, the air conduit passing through the valve is extending into the brewing chamber. Additionally, because of the air conduit extends from the top of the valve through to the bottom air will be delivered below the valve.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents to Fukushima, Okamura et al. and Wright are cited for their disclosure of the state of the art.
